It's time for a change

Switch to Linear to rejuvenate your product team

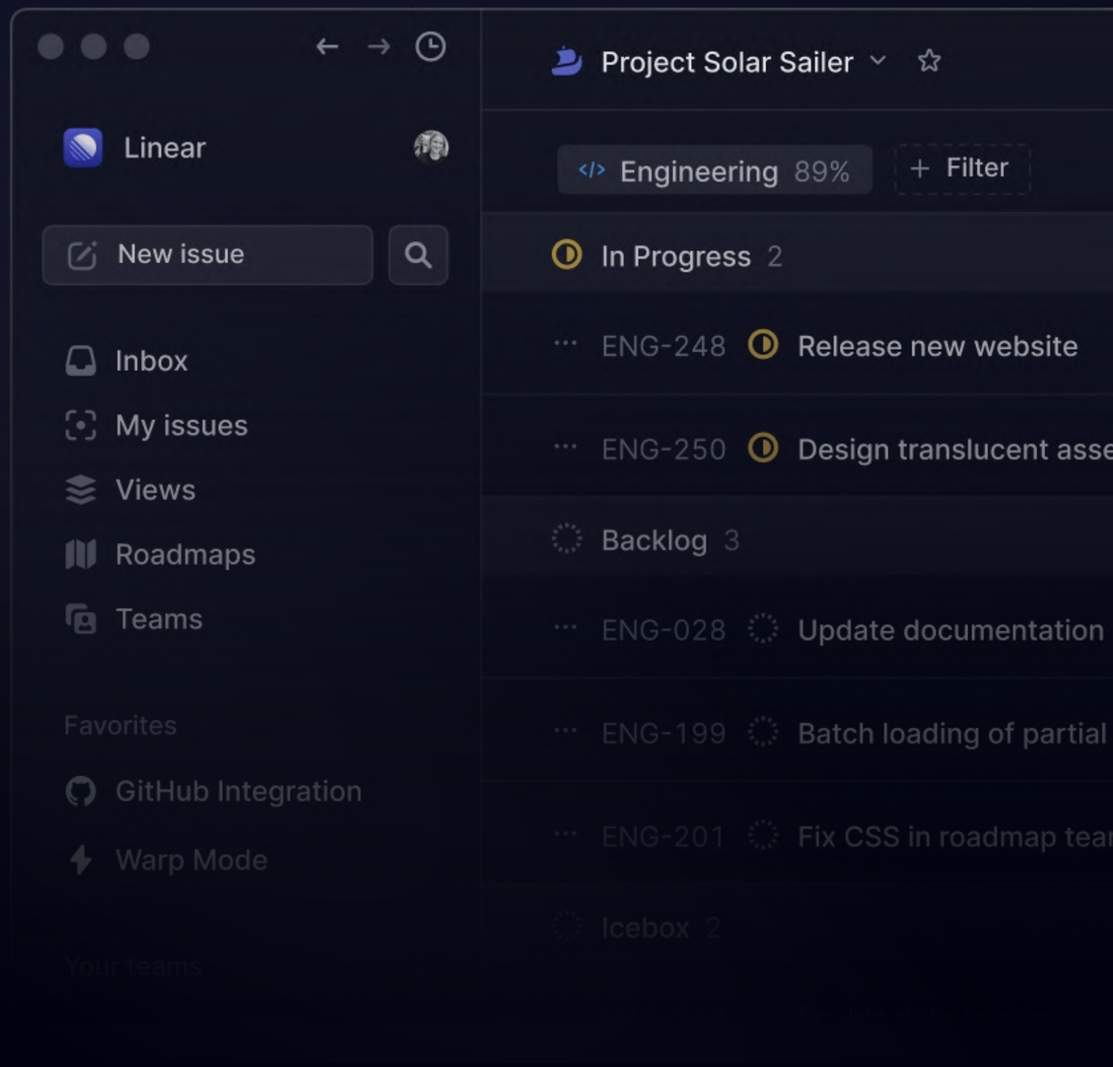
What is Linear?

Linear is a better way to build software

Linear streamlines issue tracking, sprint planning, and managing product roadmaps in a tool you'll actually enjoy using.

It's meticulously designed, incredibly fast, and comes with powerful workflows that unlock your team's full potential.

- Issue tracking
- Project management
- Sprint planning
- Roadmap planning



The problem with the tool you are using today

Your current issue tracker feels like a chore to use

Cluttered UI

- Hard to navigate
- Feature bloat
- Riddled with bugs and UX papercuts

Painfully slow

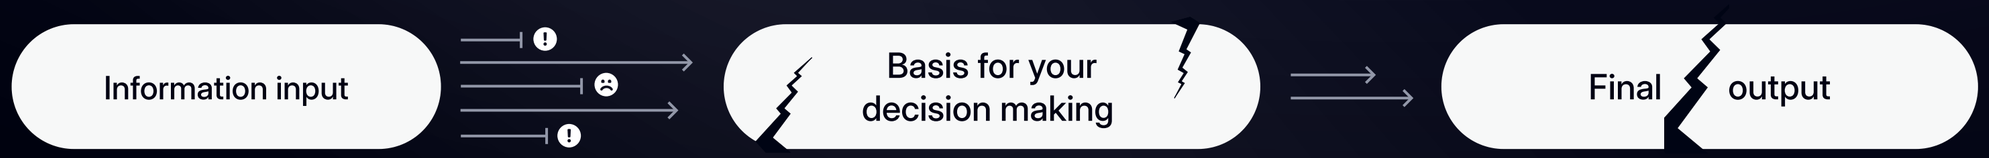
- Long loading times
- Unresponsive

Complicated workflows

- Adds overhead and busy work
- Not designed for engineering teams

The problem with the tool you are using today

A tool that nobody likes using is not a useful tool



① The more a tool feels like a chore to use, the less likely it is that people will actually use it

② As a result, the information available to you is more likely to be **incorrect**, **incomplete**, or **outdated**

③ The quality of your work is a direct result of the quality of your tools

How is Linear different?

A tool your team will actually enjoy using

Linear is built around the concept of **developer ergonomics**.

It's incredibly fast, beautifully designed, and built for the way modern engineering teams work.

It's more than just a tool. It's a perk.

Integrated with your tools

Connect Linear with Figma, Notion, GitHub, Slack, and more

Crafted to perfection

Combines UI elegance with world-class performance

Built for speed

Real-time sync and <50ms interactions

Keyboard-first design

Keyboard shortcuts for everything - no mouse required

Powerful Git integrations

Automated PR linking and status updates

Simple and clean UI

Starts simple but grows more powerful over time

How is Linear different?

Linear is designed for the way modern software teams work

Opinionated workflows
Deliberately designed *not* to do everything

Low overhead
No work around work

Works out of the box
No assembly required

Creates focus and routine
Increase productivity, velocity and overall efficacy

> We'd tried many tools before Linear but none of them felt like they were made for the way we work. Linear was a breath of fresh air - speedy, snappy, and a pleasure to use.
